

A SAINSBURY BOOK

# HARRY AT THE AIRPORT

Derek Radford

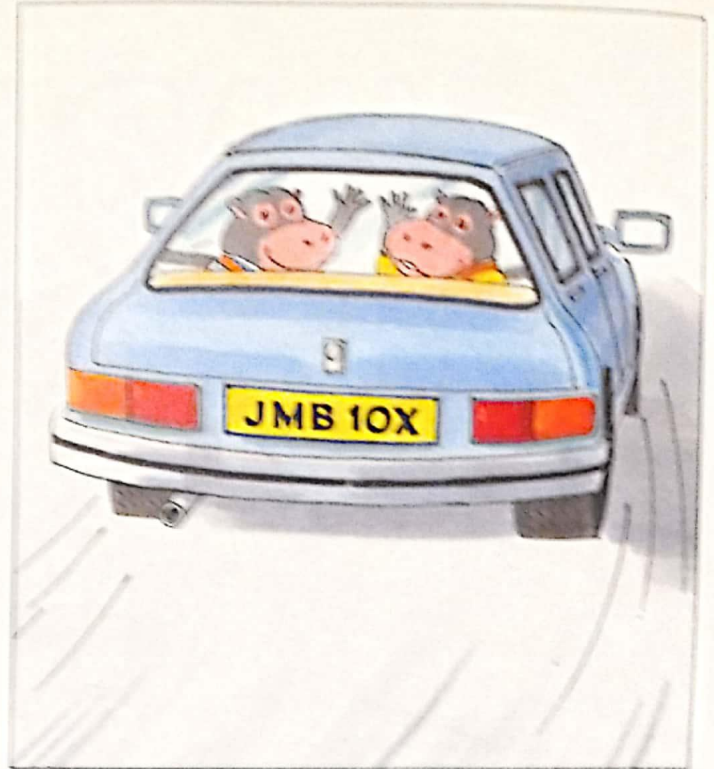

There is much to be done  
before going on holiday.

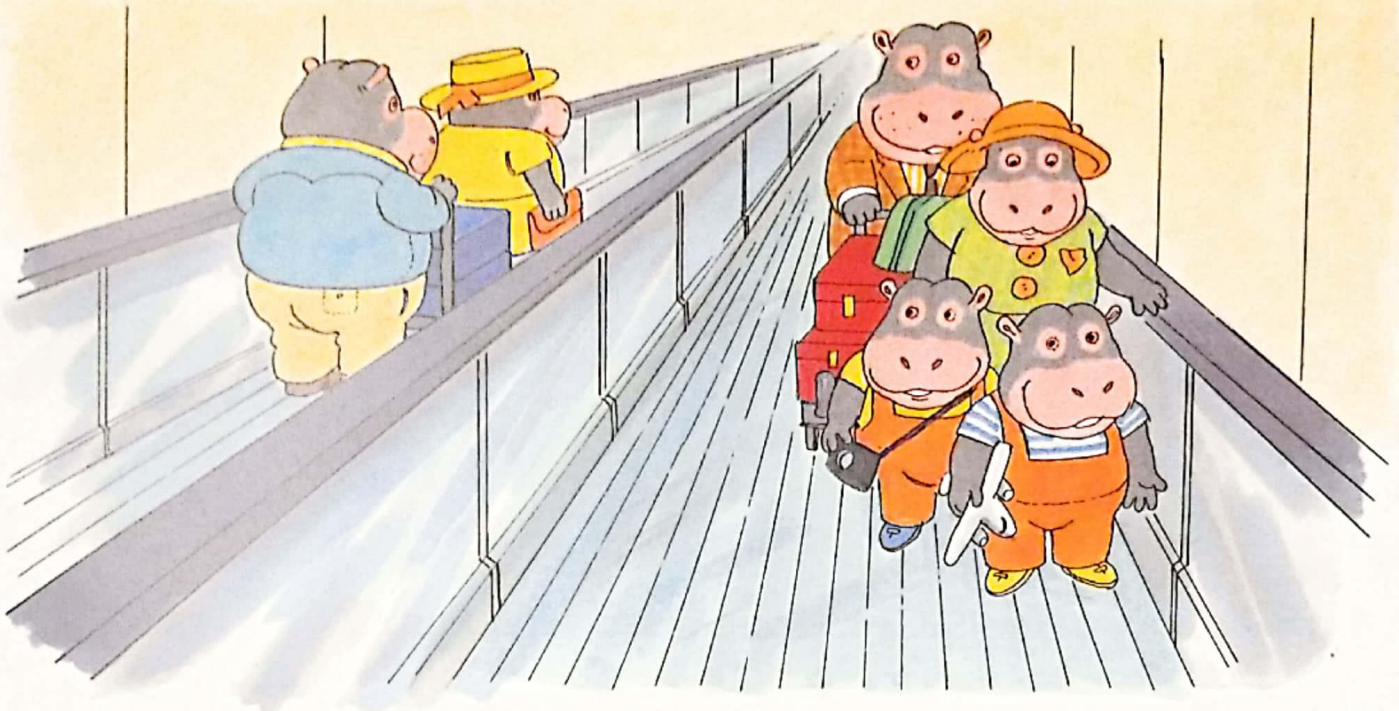

Harry and his family drive  
to the airport...

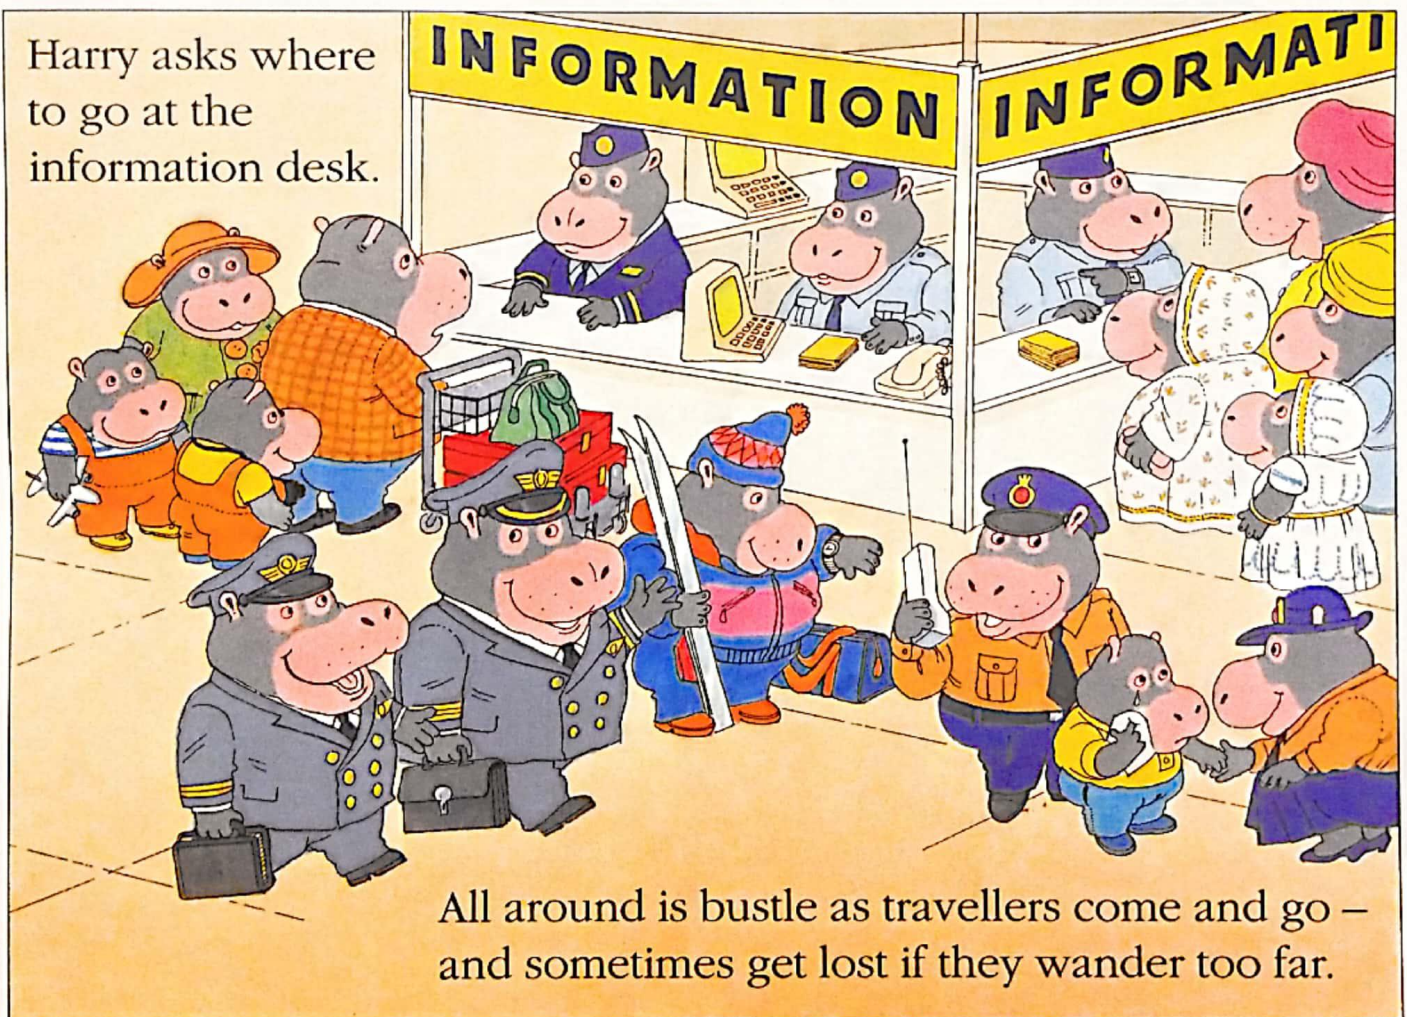

At the airport Harry puts the bags on a trolley.

They all go with the luggage on a moving walkway.

Harry asks where  
to go at the  
information desk.

All around is bustle as travellers come and go –  
and sometimes get lost if they wander too far.

There are lots of different jobs to be done at an airport...

Airport Manager

Secretary

Captain

First Officer

Mechanic

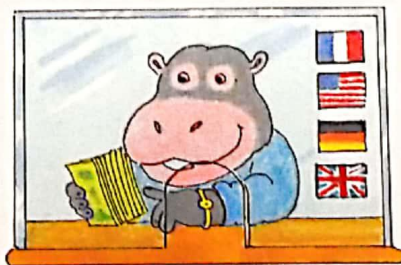

Plane Fuel Deliverer

Baggage Handler

Sweeper

Bank Teller

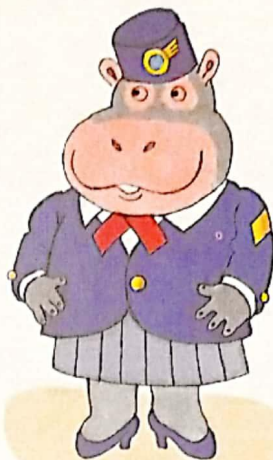

Cleaner

Flight Engineer

Stewardess

Air Traffic Controller

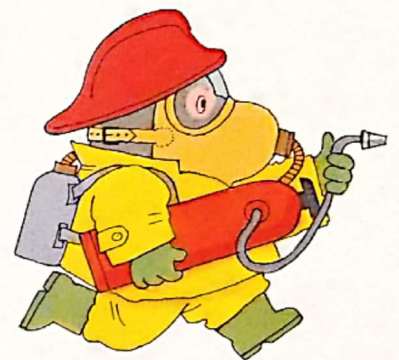

Security Staff

Passport Officer

Customs Officer

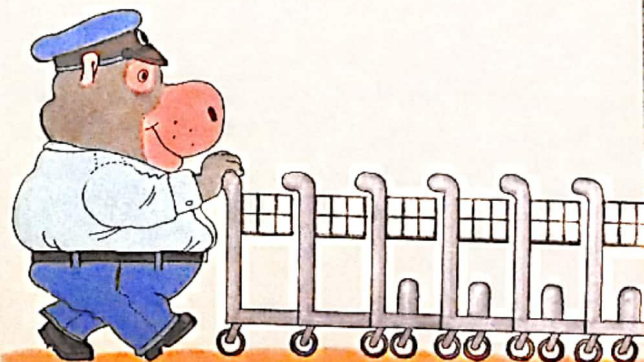

Fire Fighter

Cafeteria Cook

Duty Free Shop Assistant

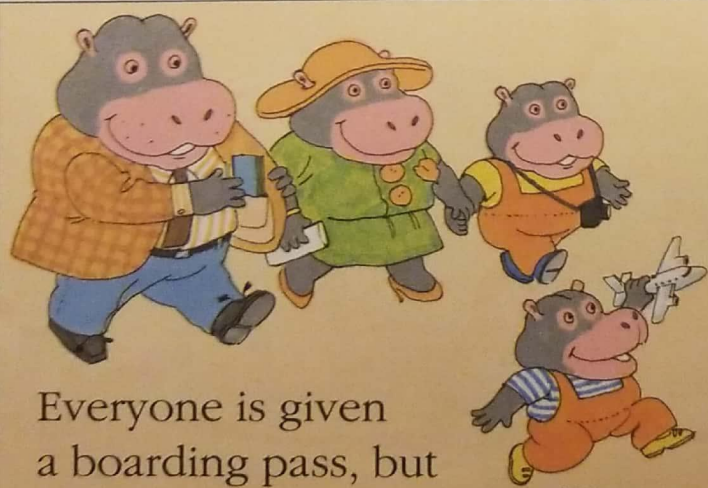

Trolley Collector

Harry hands in the tickets at the check-in counter. The bags are weighed, given baggage labels, and put on a conveyor belt.

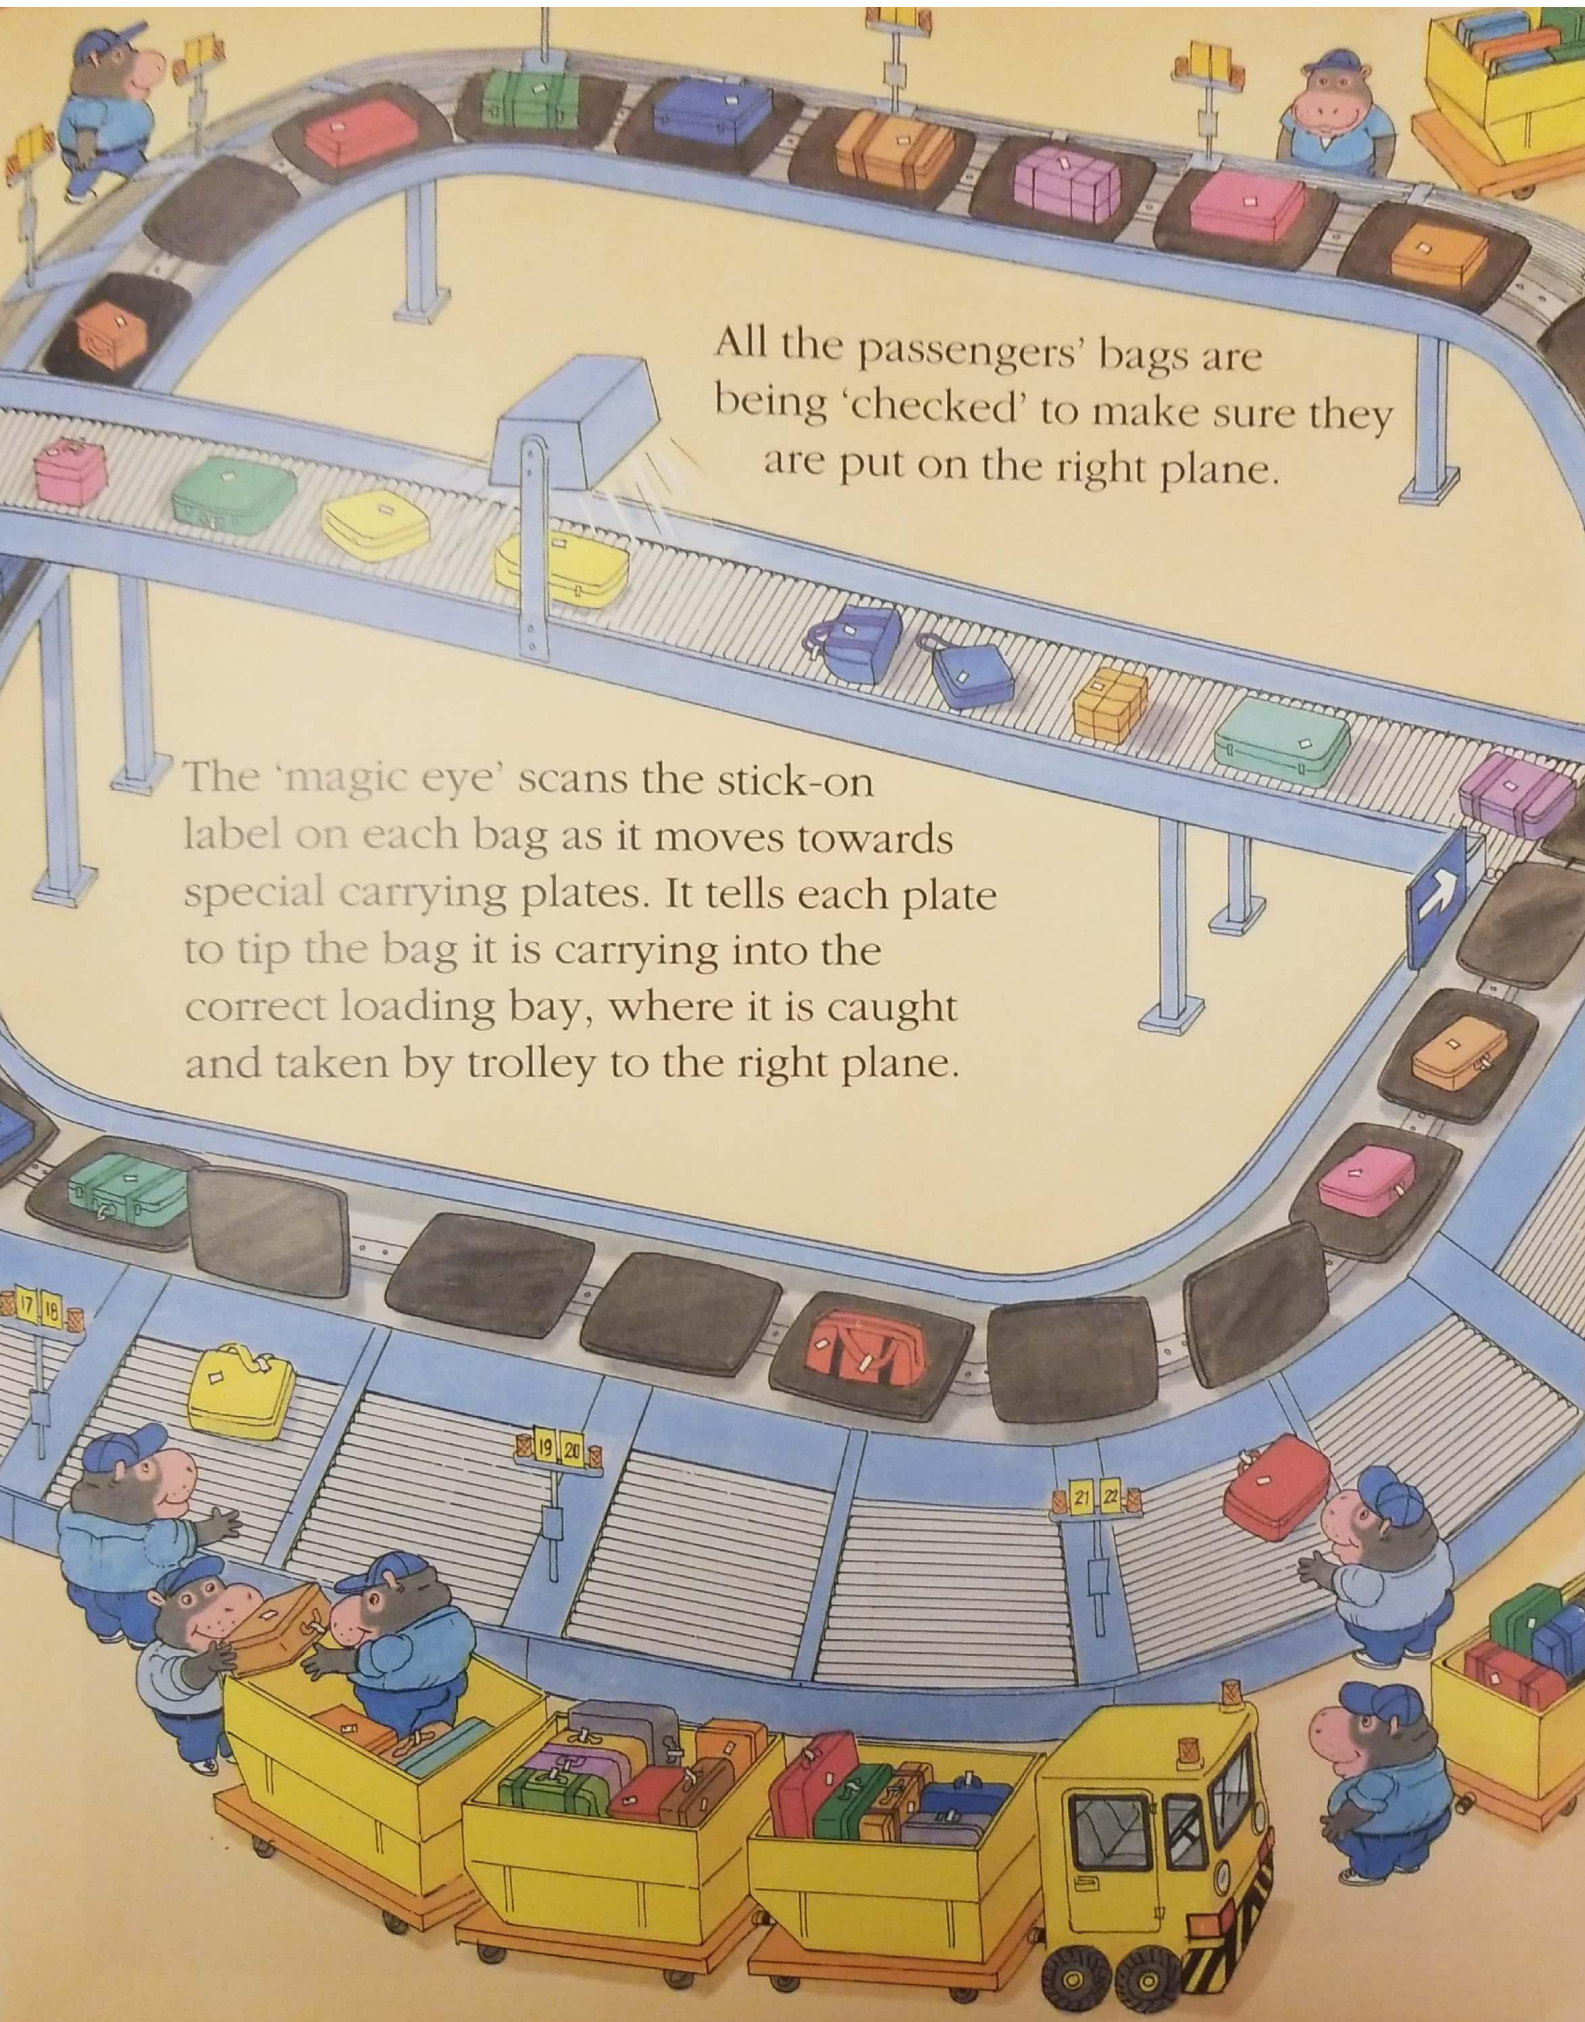

Everyone is given a boarding pass, but there is still time to look around.

A stick-on label like this is put on Harry's baggage:

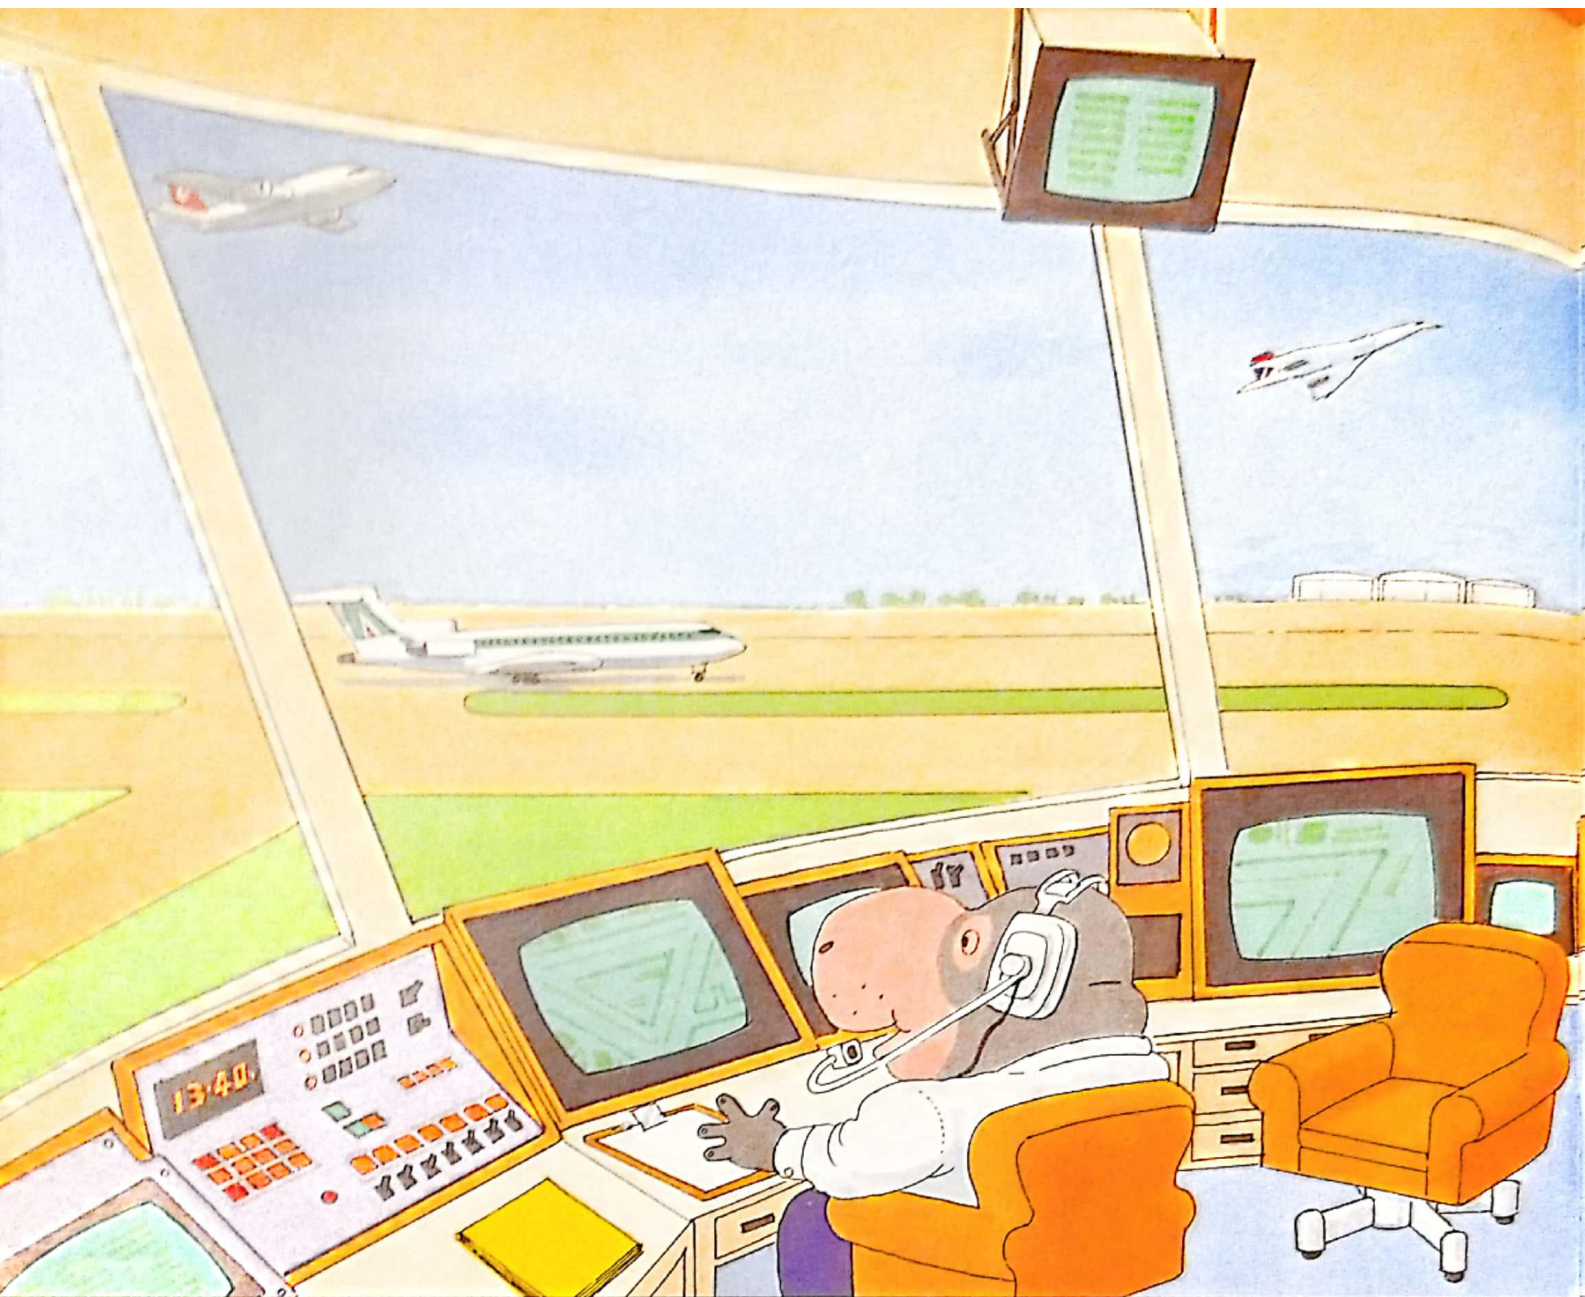

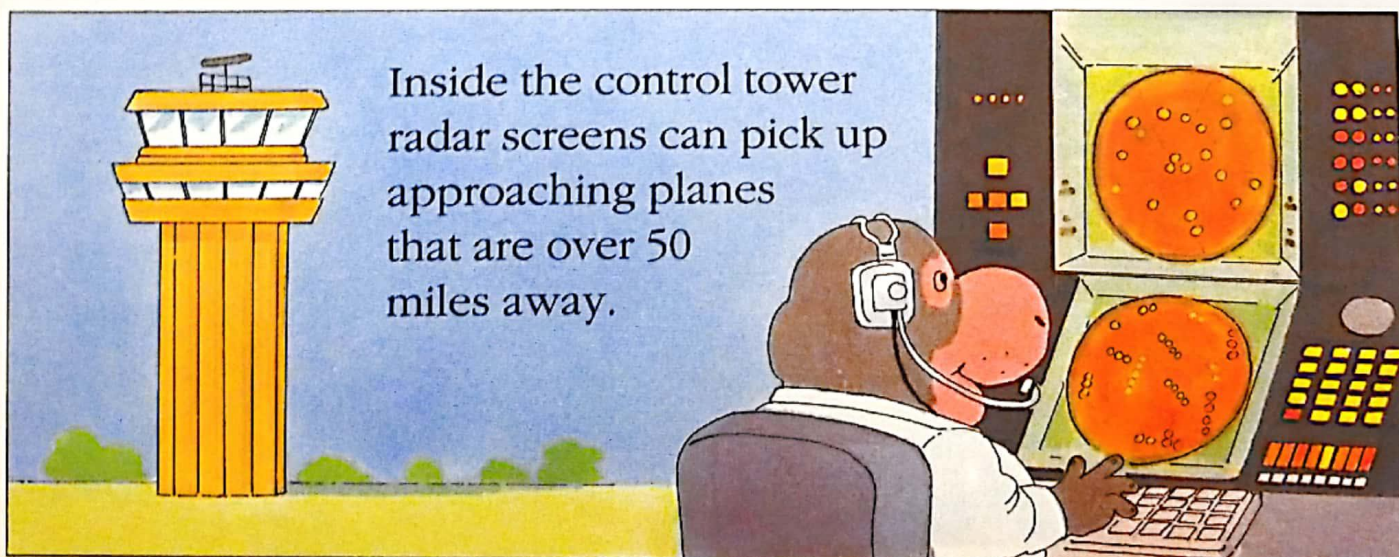

All the passengers' bags are being 'checked' to make sure they are put on the right plane.

The 'magic eye' scans the stick-on label on each bag as it moves towards special carrying plates. It tells each plate to tip the bag it is carrying into the correct loading bay, where it is caught and taken by trolley to the right plane.

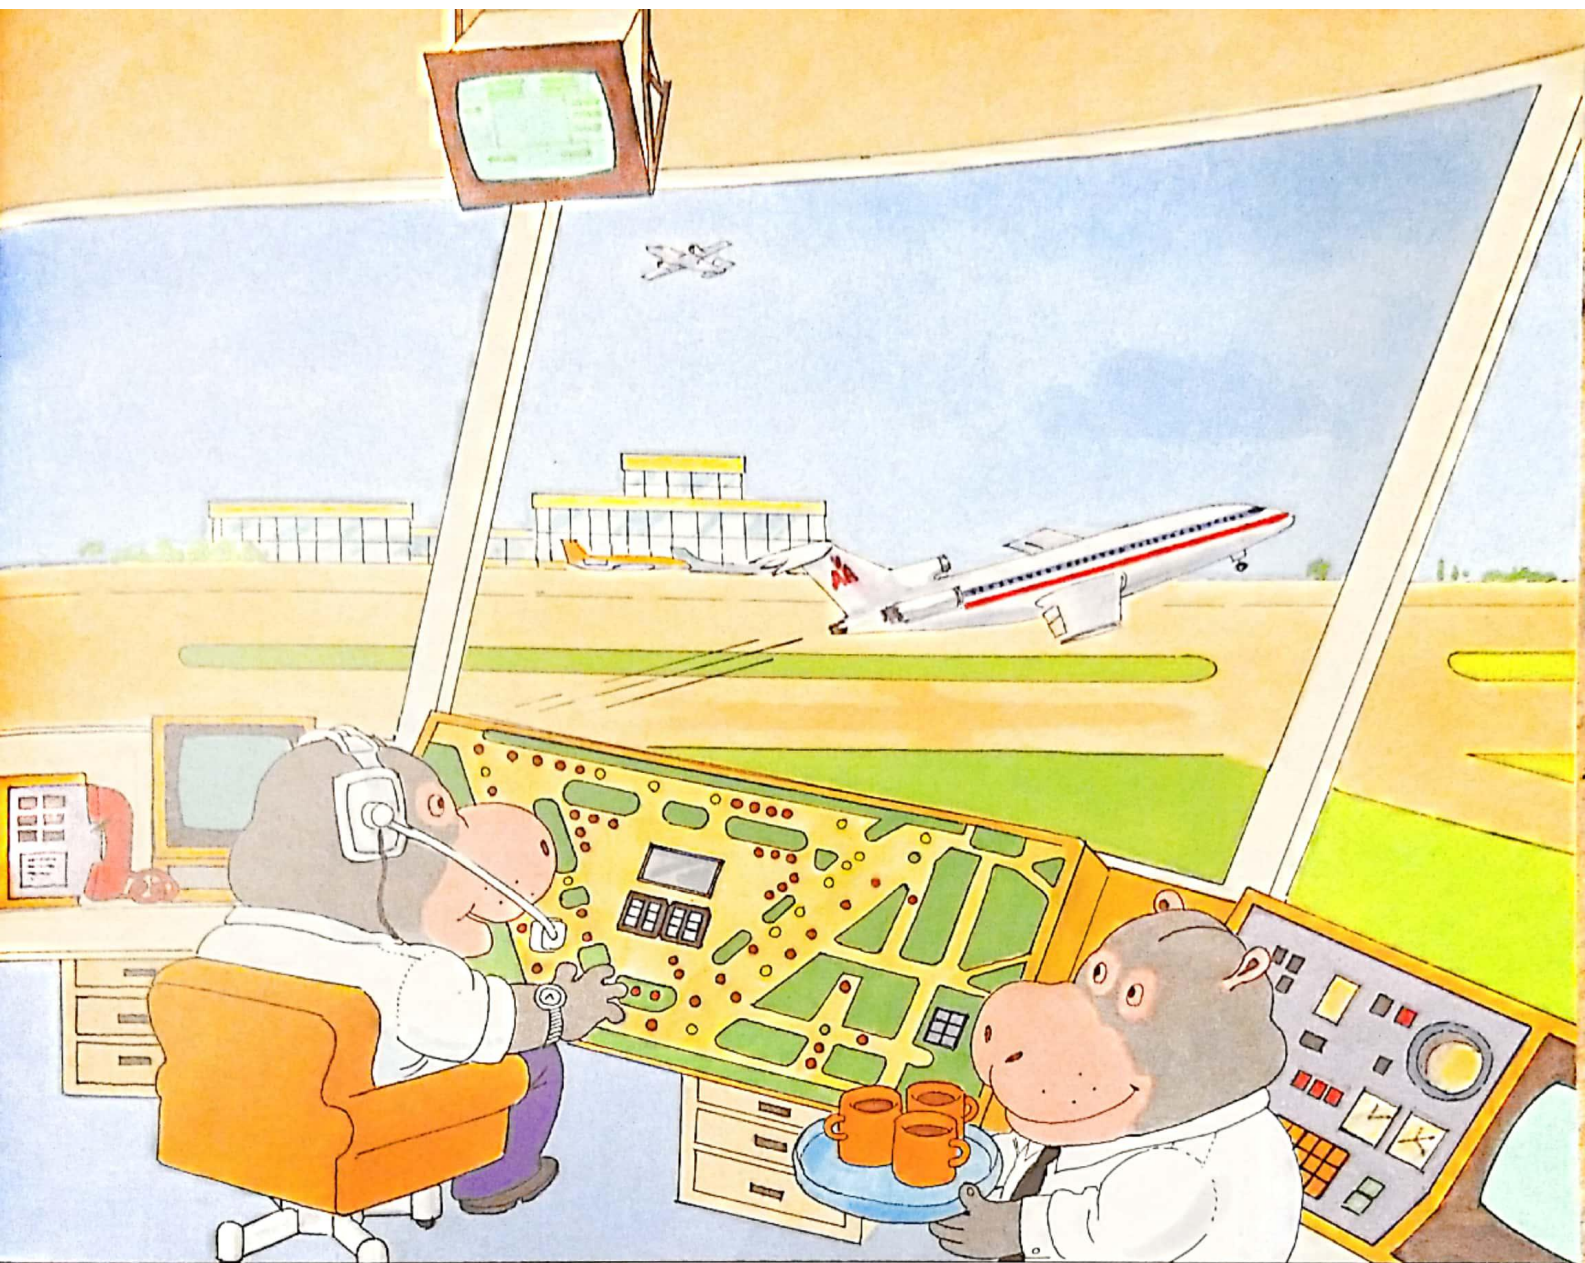

Over in the control tower, air traffic control tells pilots when to land...

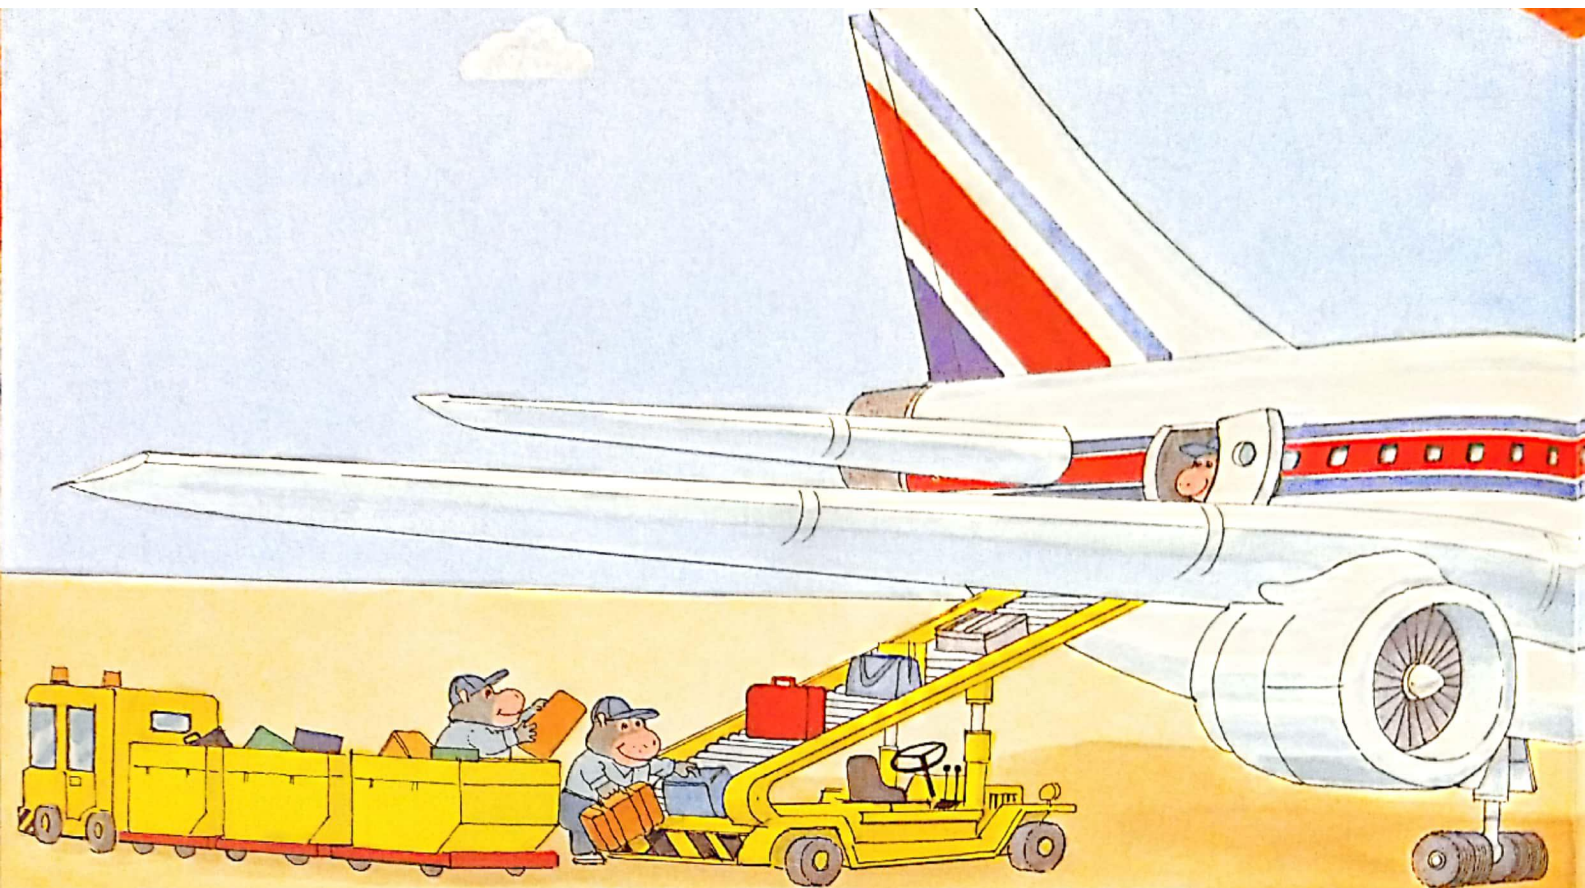

...or take off, and which runway to use.

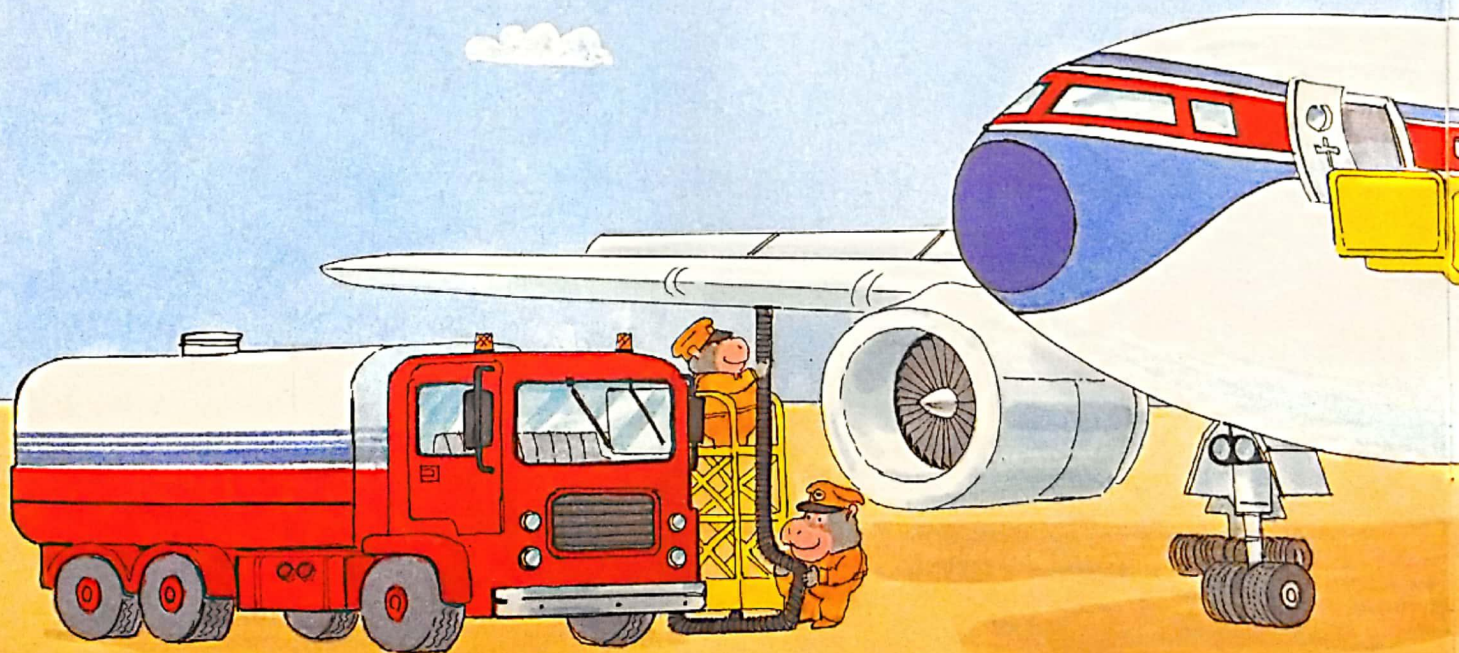

Runways are  
lit up at night  
so pilots can  
see where to  
land safely.

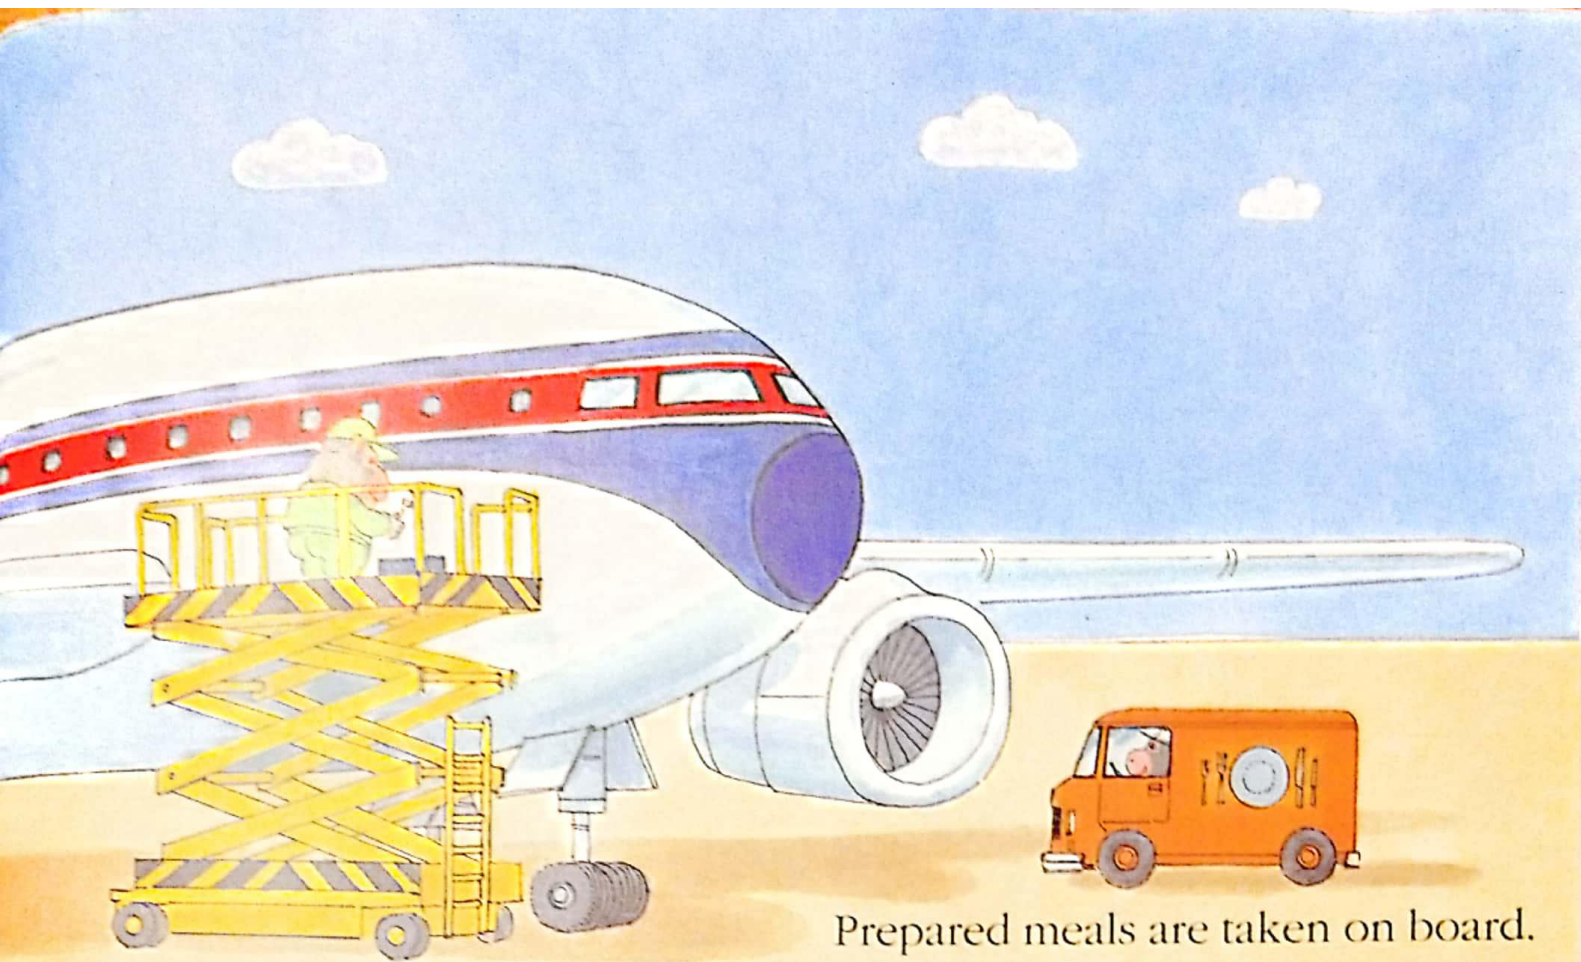

Before a plane takes off, the bags are loaded.

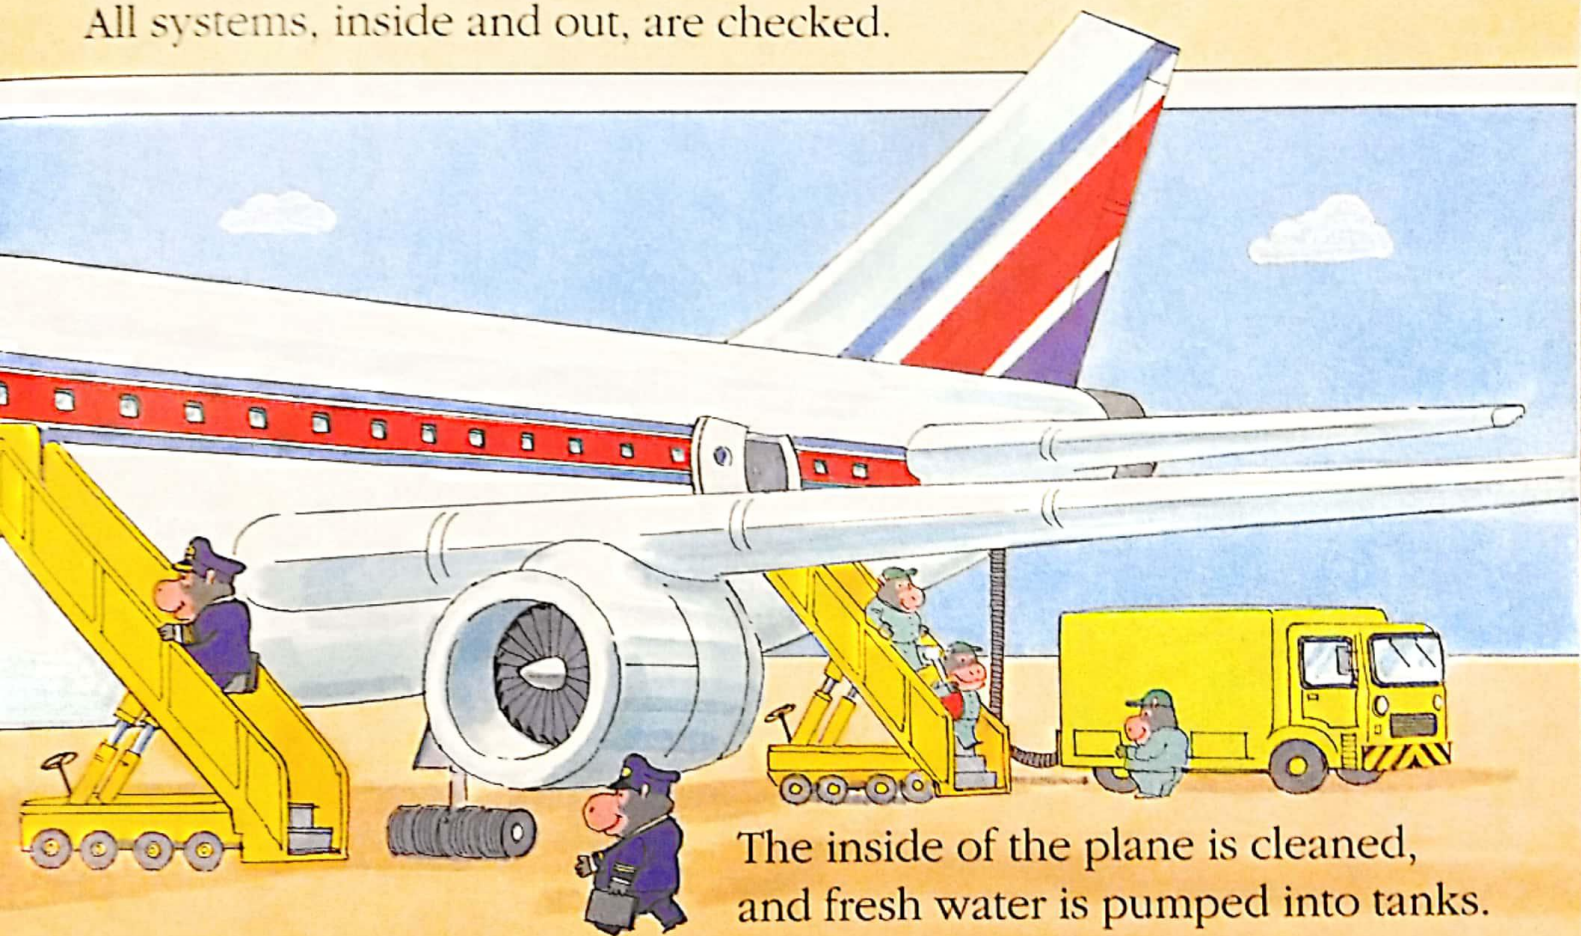

The plane's fuel tanks are filled.

All systems, inside and out, are checked.

Prepared meals are taken on board.

The inside of the plane is cleaned,  
and fresh water is pumped into tanks.

The Captain and crew go on board.

Here are some of the main parts of a passenger plane:

Powerful jet engines propel the plane.

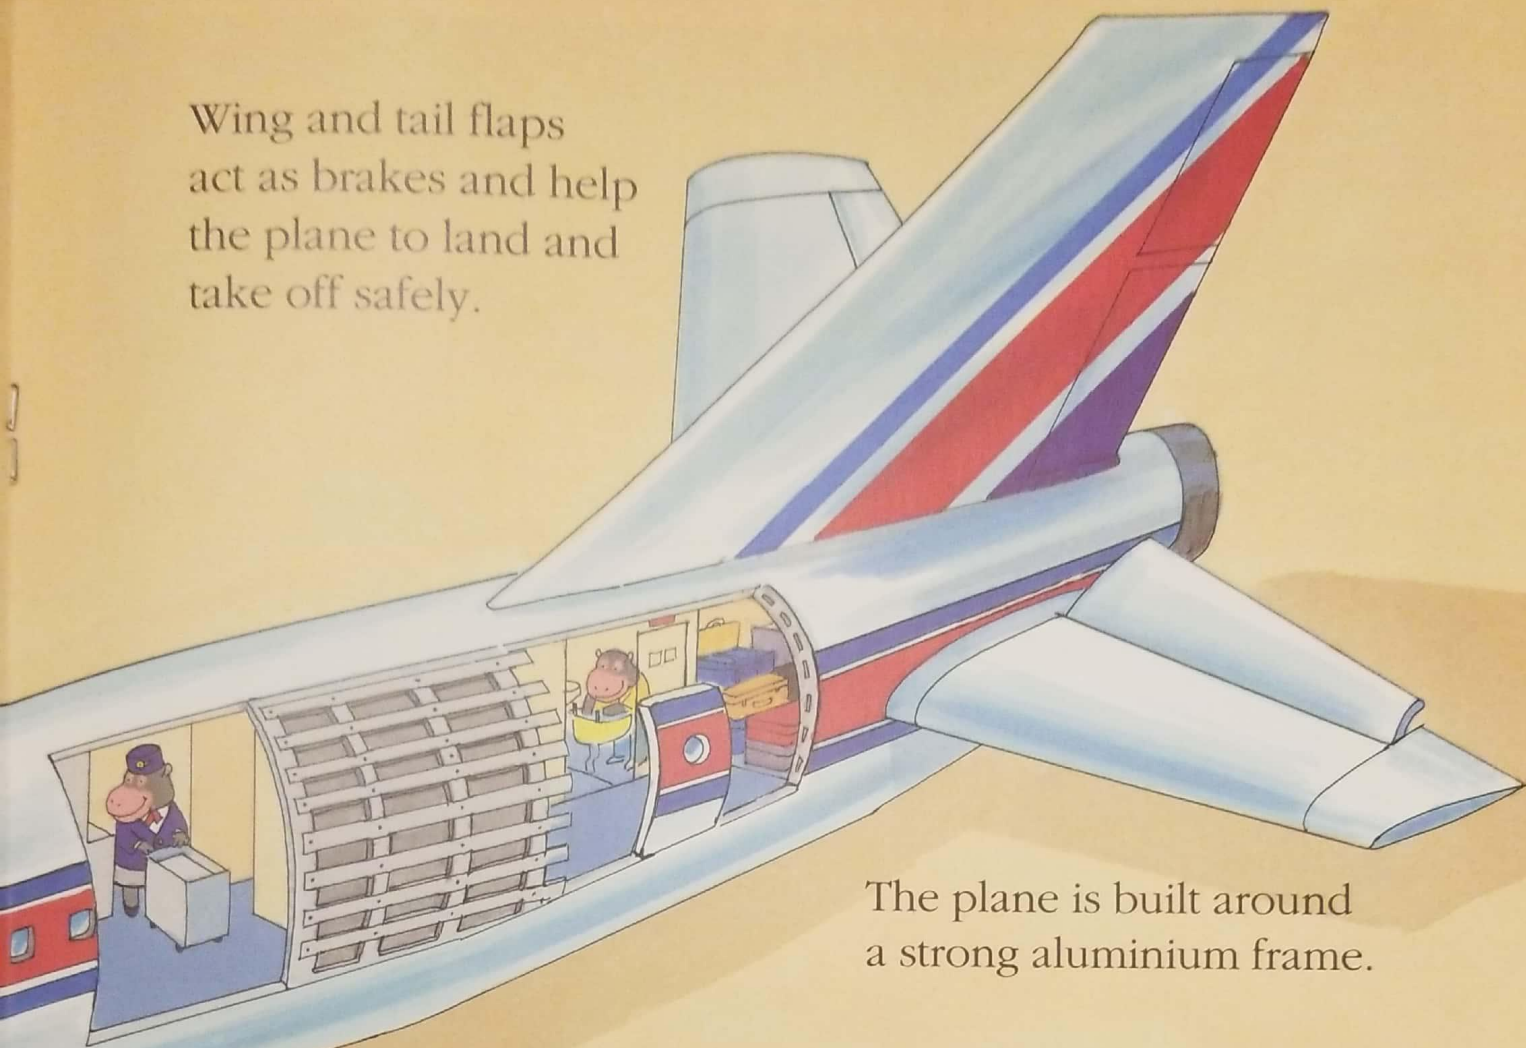

The flight deck, where the Captain and co-pilot sit.

Each door has an inflatable slide which can be used in an emergency.

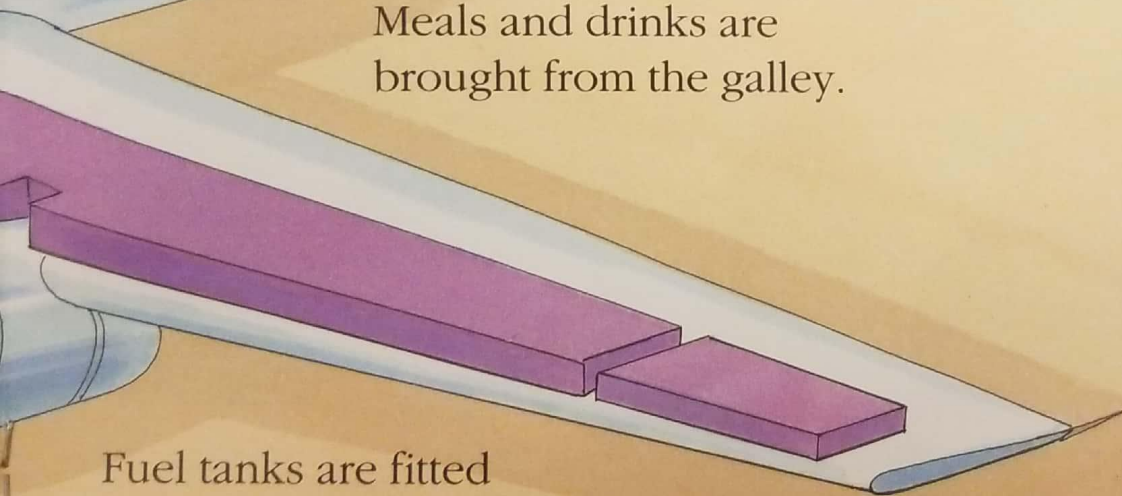

Wing and tail flaps  
act as brakes and help  
the plane to land and  
take off safely.

The plane is built around  
a strong aluminium frame.

Meals and drinks are  
brought from the galley.

Fuel tanks are fitted  
inside the wings.

Arrivals		Arrivals		Arrivals

In the terminal,  
passengers are arriving  
from all over the world...

# Departure Information

13:40

Agent Flight Time Destination Information Gate

KLM	KM51	12:50	AMSTERDAM	DELAYED	—
Air France	AF 24	13:38	PARIS	BOARDING	5
Iberia	IB 70	13:30	MADRID	BOARDING	4
Pan-Am	PA102	13:20	NEW YORK	BOARDING	12
TWA	TW32	13:25	LOS ANGELES	DELAYED	—
Alitalia	AZ 46	13:56	BOLOGNA	BOARDING	6
Lufthansa	LH18	13:45	FRANKFURT	BOARDING	1

...but Harry is more interested in the time their flight will leave.

Harry and his family set off for the Departure Lounge.

Before entering the Departure Lounge, each passenger has to show a passport and a boarding card for checking.

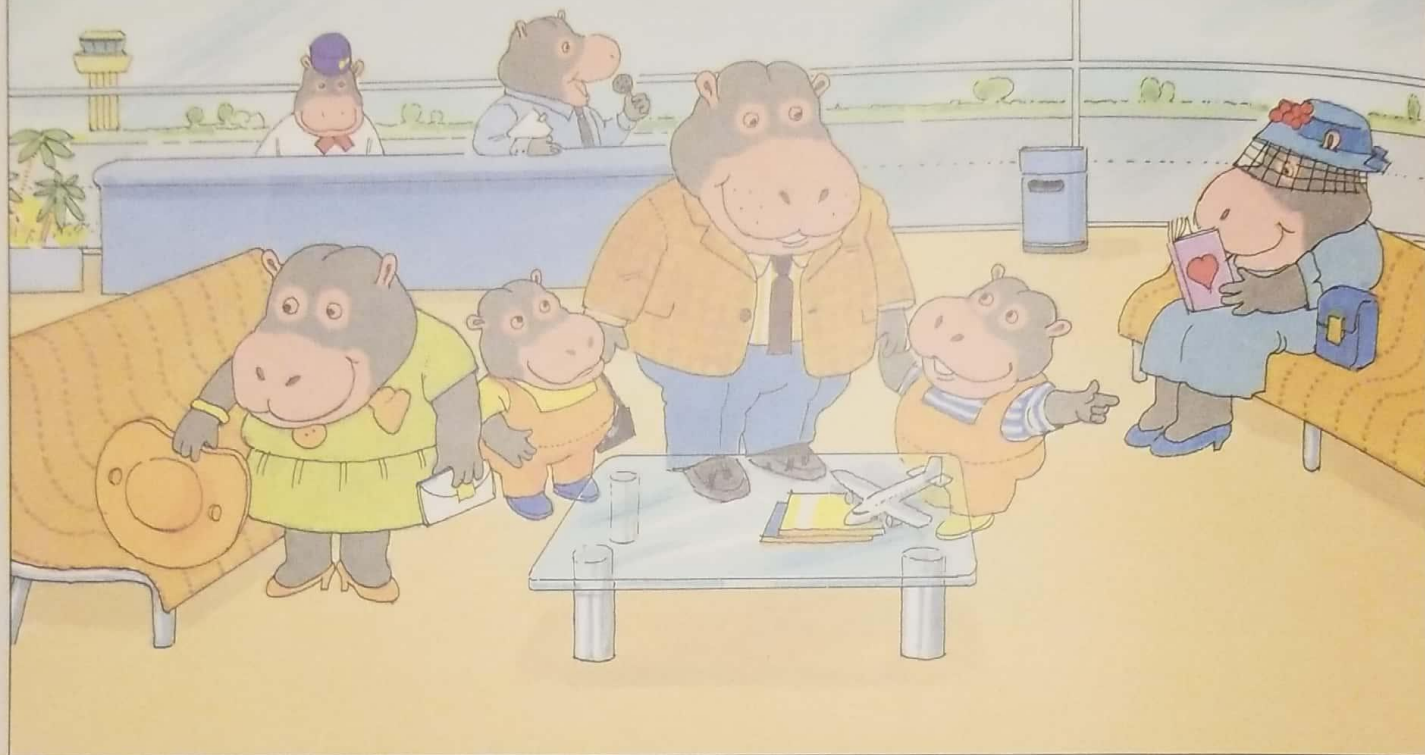

Hand luggage is passed through an x-ray machine which can check the insides of all bags without opening them.

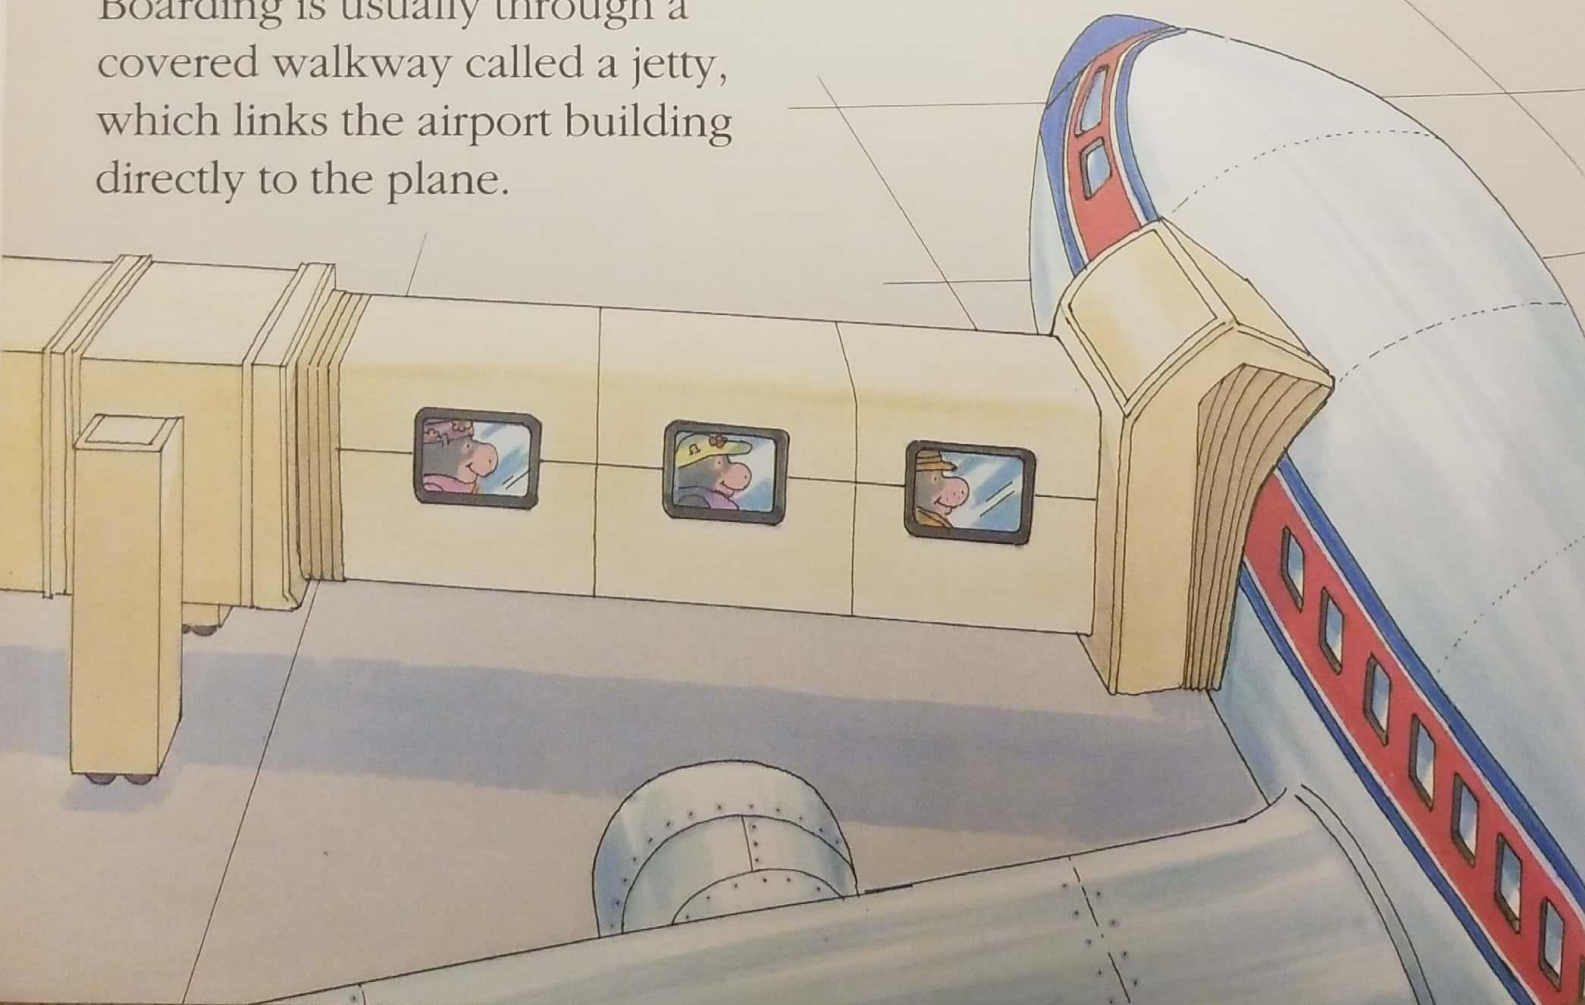

There is time to do some last-minute shopping.

Harry's flight number is called. It will be leaving from Gate 4 where there is a small waiting area. It is almost time to go on board the plane.

Boarding is usually through a covered walkway called a jetty, which links the airport building directly to the plane.

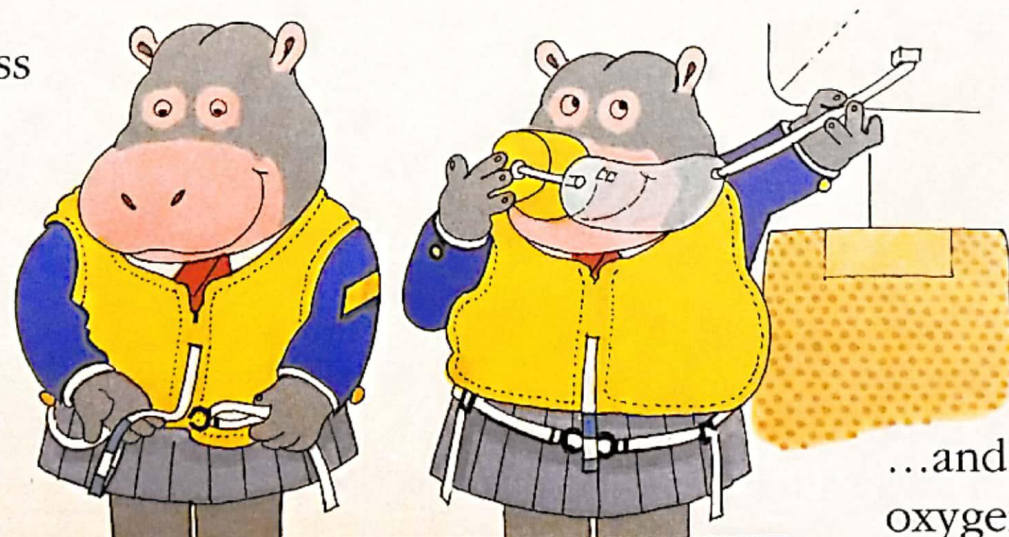

Passengers are welcomed aboard by the cabin crew.

Harry puts the hand luggage in a locker above the seats.

A stewardess shows how to put on a lifejacket...

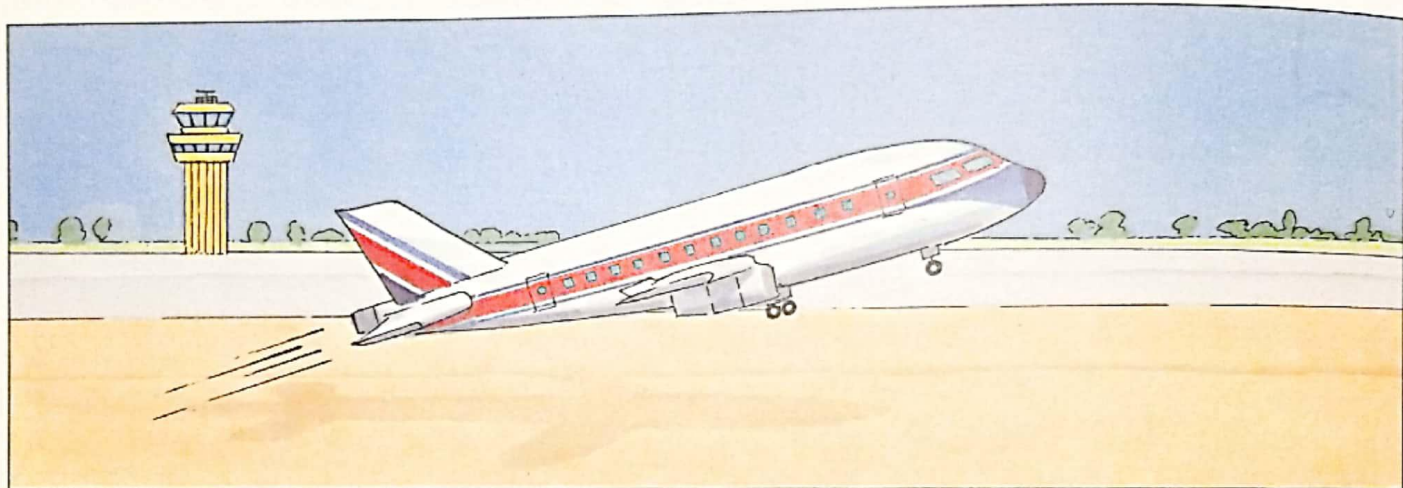

...and use the oxygen masks.

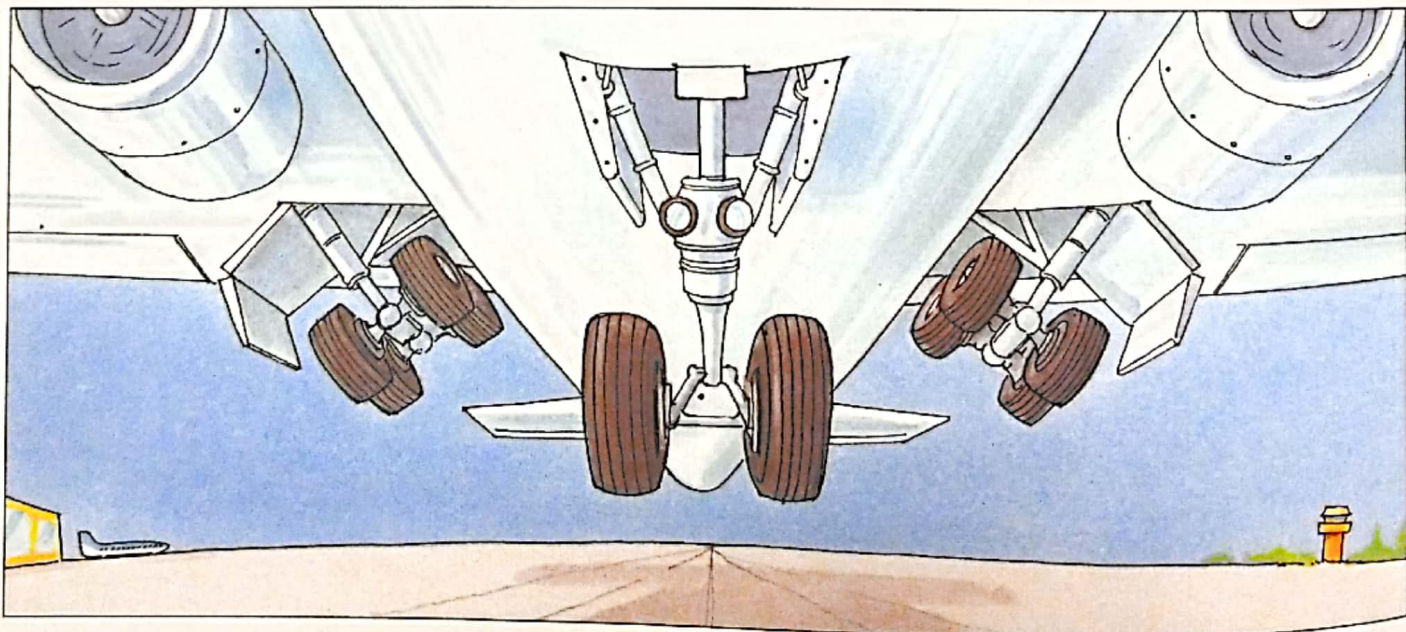

Before take-off, seat belts must be fastened.

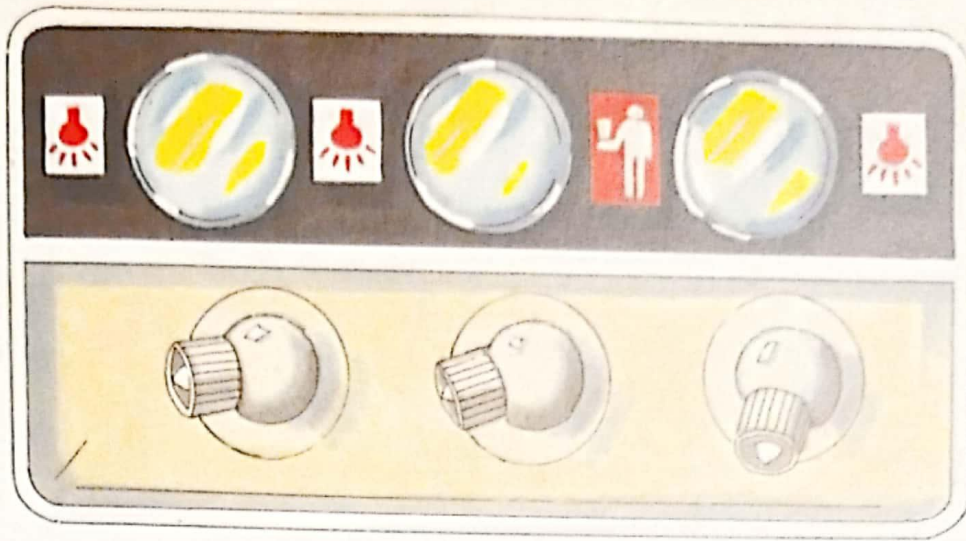

The plane roars down the runway and lifts off the ground.

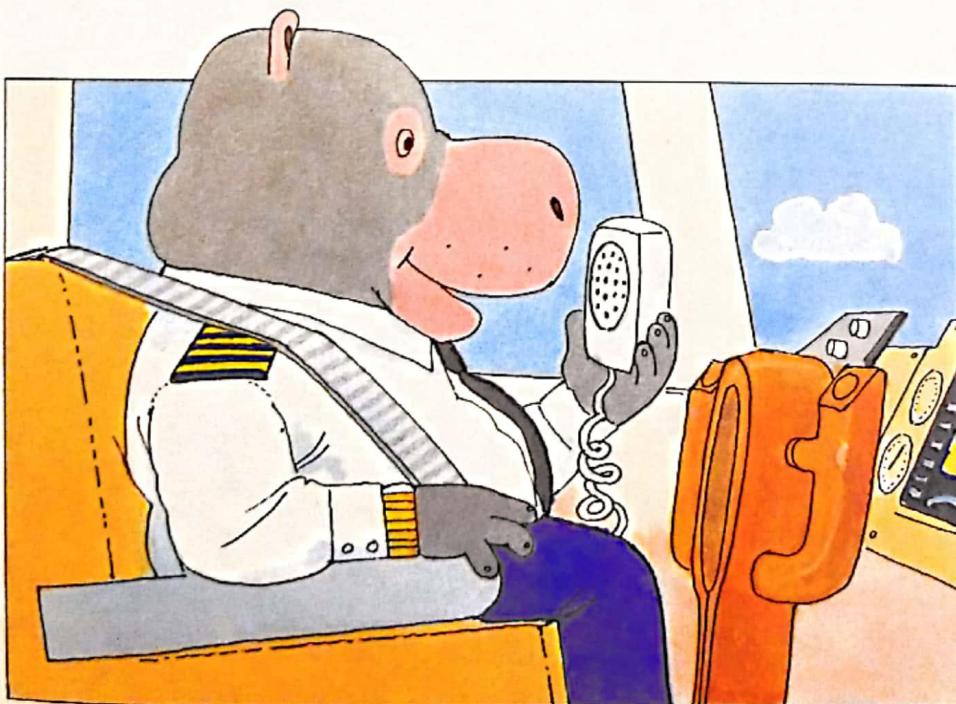

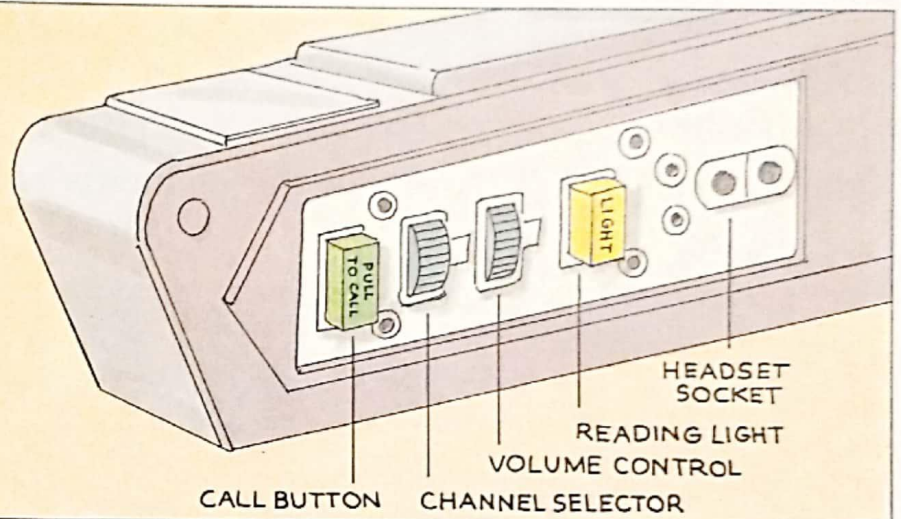

There is sometimes a small bump as the wheels are folded away after take-off.

Overhead there are reading lights,  
and jets to give cool air.

The seat arms  
have controls  
for in-flight  
entertainment  
and calling the  
stewardess.

The Captain asks  
everyone to keep  
their seat belts  
loosely fastened.  
Most flights are  
smooth, but  
sometimes the  
weather makes  
them bumpy for  
a little while.

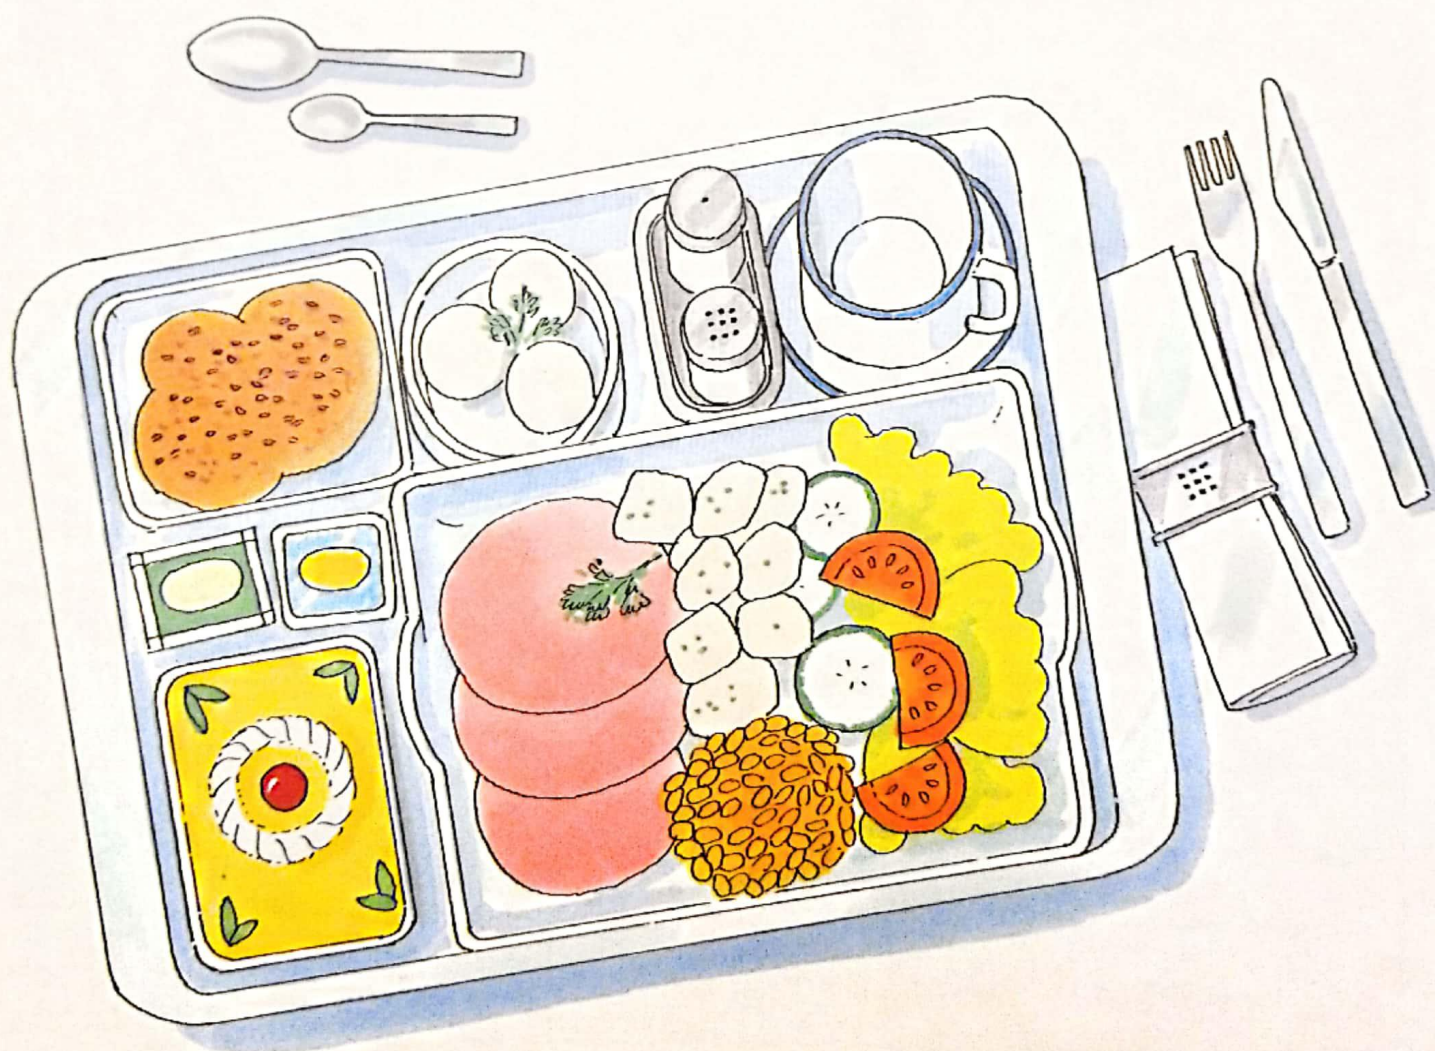

Shortly after take-off, a trolley of drinks is brought down the aisle.

In the galley, specially prepared meals are loaded onto trolleys.

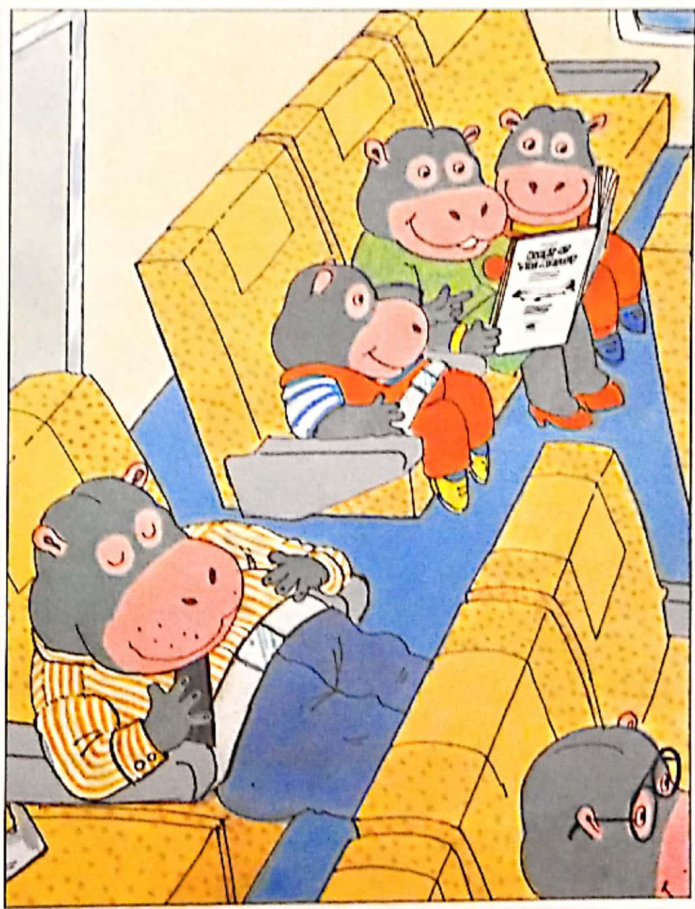

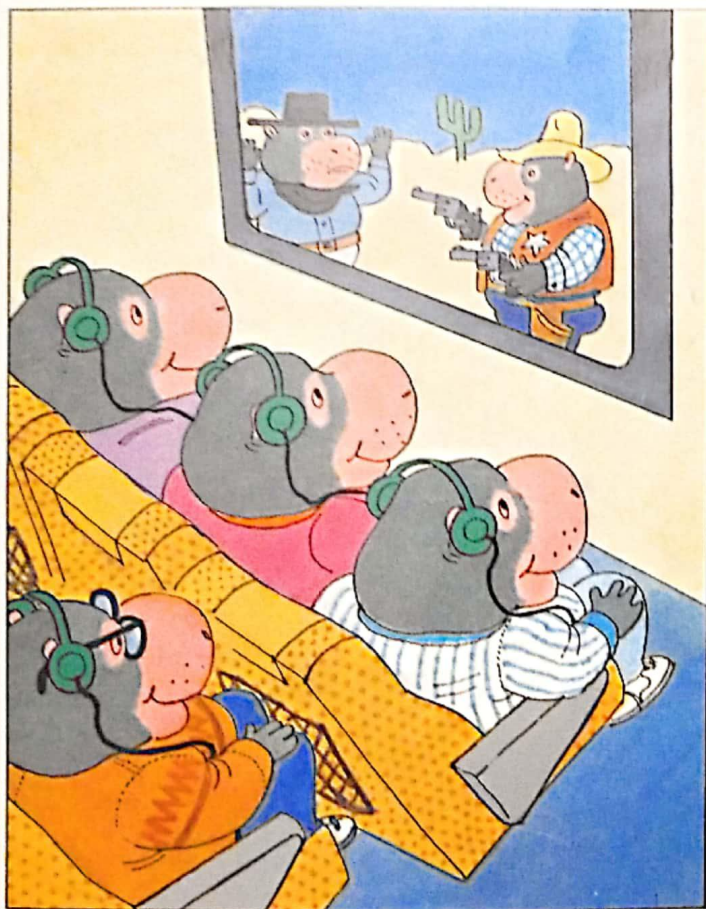

After the passengers have eaten, the things are cleared away.

Toilets are situated in several places on the plane.

On very long flights there is time to watch a film, to read... or to sleep.

The flight deck is always busy.

1 Joy stick (to steer the plane)

3 Back-up information

5 Fire extinguisher knobs

2 Course display check

4 Speed brake

6 Engine conditions display

[7] Undercarriage control lever

[9] Key pad (to give plane instructions)

[11] Flight display: height, speed etc.

[8] Engine thrusters

[10] Automatic pilot panel

[12] Lighting controls
